

600HS PLUS HVAC SYSTEM

BENEFITS & FEATURES OF PLUS HVAC & VS SYSTEMS

Specially programmed GE ECM motors allow the 600HS Plus to run in-sync with any variable speed drive HVAC unit. This means the 600HS Plus will run at high speed during either Heating or Cooling mode and then ramp down to one of four pre-programmed speeds during fan-only or off-demand mode. ECM motors are more efficient and can use up to **40% less electricity** than standard motors. This means quiet running, 24/7 operation for continuous filtration at exceptionally low operating costs. Capacity up to 600 CFM.

The 600HS Plus uses a 1/3 HP GE ECM Motor. 120/240 volt, 1 ph, 60 Hz, 1050 RPM for HVAC Mode. EVO/ECM Controller with Tap Selector Board and Thermostat Connecting Block. Can be used with any type of heating/cooling system. Works off the thermostat.

600HS PLUS VCU SYSTEM

The 600HS PLUS can also be supplied with an EVO/VCU LED Controller that will allow finite variable speed control from 1% to 100% of rated volume (max 600 CFM). The LED controller offers large lighted number pads making it easy to adjust volume. The controller can be mounted in the unit, in the door or remotely to the unit. This feature will allow the use of the 600HS PLUS for any stand-alone application where variable speed adjustment is required. Adjustments from 10 CFM to 600 CFM.

The 600HS PLUS VCU utilizes an LED single knob controller for finite control of air flow. This controller pack has its own 24 VAC transformer.
